Hyderabad / Gurugram • +91 7989987012 • yashwanthathota@gmail.com • linkedin.com/in/athota-yashwanth • github.com/Nitro-Builds-Yash

CAREER OBJECTIVE

Enthusiastic and technically curious Computer Science graduate with hands-on expertise in **Linux administration, Docker containerization, CI/CD pipelines, Bash & Python scripting, and Cloud infrastructure (AWS/Azure)**. Seeking to leverage strong foundational problem-solving and automation skills as a **DevOps Engineer (Fresher)** at SquareOps Technologies to build, automate, and maintain resilient, scalable cloud systems.

TECHNICAL SKILLS

Operating Systems & Scripting: Linux / Unix (Ubuntu/Debian, CentOS), Shell/Bash Scripting, Python, Java
Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, CloudWatch), Microsoft Azure Fundamentals, Basic Terraform (IaC)
Containers & Orchestration: Docker, Docker Compose, Basic Kubernetes (Pods, Services, Deployments)
CI/CD & Version Control: Git, GitHub, GitHub Actions, CI/CD Pipeline Automation, Webhooks
Networking & Protocols: TCP/IP, DNS, HTTP/HTTPS, SSH, REST APIs, Reverse Proxy, Load Balancing
Databases & Tools: MySQL, MongoDB, Postman, VS Code, AST Analysis

PROJECTS (GITHUB)

Halo – Production Agentic QA System & Containerized Pipeline | [GitHub](#) Aug 2026

Python, Docker, GitHub Actions, REST APIs, Hybrid Retrieval, Linux

- Engineered a modular, production-ready QA & document analysis pipeline with 4 autonomous evaluation gates and self-correcting logic.
- Containerization & CI/CD:** Containerized the multi-stage application using **Docker** to standardize deployment across environments; configured **GitHub Actions** for automated testing and linting workflows.
- Reliability & Monitoring:** Built structured health-check endpoints, robust error handling, and optimized execution pipelines ensuring high uptime and reliable response delivery.

VoxCode – Voice-Native Automated Code & Patch Execution Engine | [GitHub](#) Aug 2026

Python, Shell Scripting, Git, AST Analysis, Linux Subsystems

- Built an intelligent developer productivity engine that parses codebase AST structures, retrieves context, and applies real-time code patches.
- System Automation:** Created **Bash automation scripts** to streamline dependency management, process isolation, and automated testing across multi-file project repositories.
- Release Automation:** Configured GitHub release pipelines, automated version tagging, and standardized runtime configuration for zero-friction execution.

Crypto-Currency API & Secure Backend Service | [GitHub](#) Aug 2025

Node.js, Express.js, MySQL, Docker, JWT, REST APIs

- Designed and deployed a secure RESTful API backend handling transactional tracking, wallet simulations, and JWT-based authentication.
- Implemented environment-based secret configuration management and containerized the service using **Docker** for seamless staging and deployment.

EDUCATION

Marri Laxman Reddy Institute of Technology and Management (MLRITM) Sept 2022 – May 2026

B.Tech in Computer Science & Engineering | GPA: 8.20 / 10.0

Relevant Coursework: Computer Networks, Operating Systems, Software Engineering, Database Management Systems

Vignan Junior College — Intermediate (MPC Stream) June 2020 – May 2022

Marks: 836 / 1000

Bhashyam High School — SSC Board June 2019 – May 2020

GPA: 10.0 / 10.0

CERTIFICATIONS

- Designing and Implementing Microsoft Azure Solutions** — Infosys ICT Academy
- Introduction to Python for Development & Automation** — DataCamp
- Data Analytics Job Simulation** — Deloitte
- Salesforce Certified Agentforce Specialist** — Salesforce
